

Twister CLIFFS

COMING SOON TO WICHITA, KANSAS
TEAM 12 - TPEG ALUMNI COMPETITION

THE STORY

- In 1885, in the midst of tornado season, a freak earthquake hit Corn County, Kansas.
- During this earthquake, a twister formed right in the epicenter of the quake, creating this massive gorge of land, separating town into two.
- Nowadays, Corn County is known as ‘Twister Cliffs,’ and visitors are able to visit the split in the land and encounter some amazing sights, sounds and friends within the cavern.
- Corn County is still known for its crops, and has become a haven for pilots to train in crop dusting.
- The land is split into two halves, with the cliffs being 30’ higher than the rest of the area. To assist guests with disabilities in ascending the peak, a chairlift was designed to shuttle guests up and down (both pathways to the peak consist solely of ramps that are ADA compliant as well).

Twister CLIFFS

Fresh on the fields of Tornado Alley, a perfect storm occurred in 1885. A miraculous earthquake collided with a tornado and created this beautiful cliff filled with storms, creatures, caverns and more.
